Get Facebook App info

Step 1: Open this page https://developers.facebook.com/ then click "Log In"

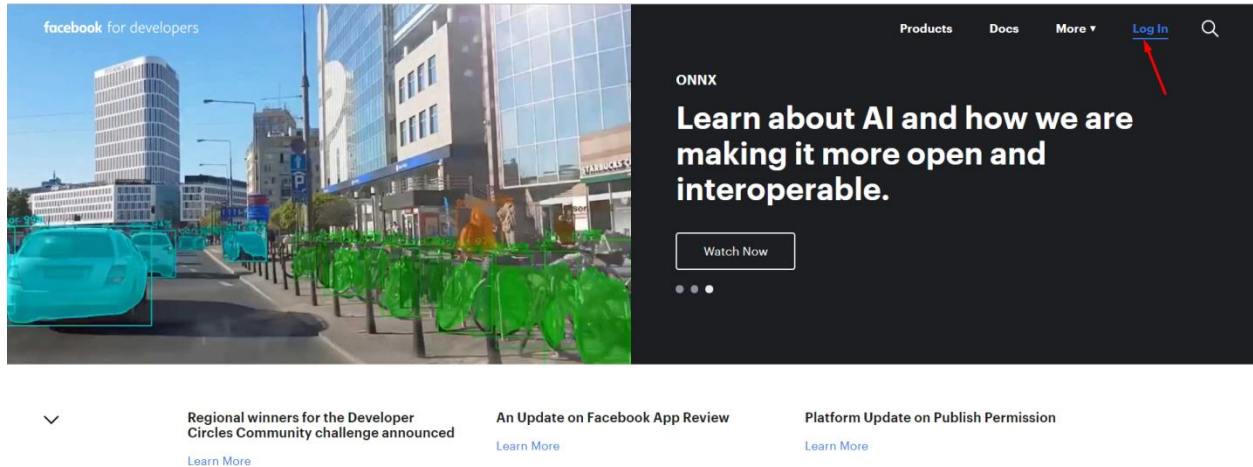

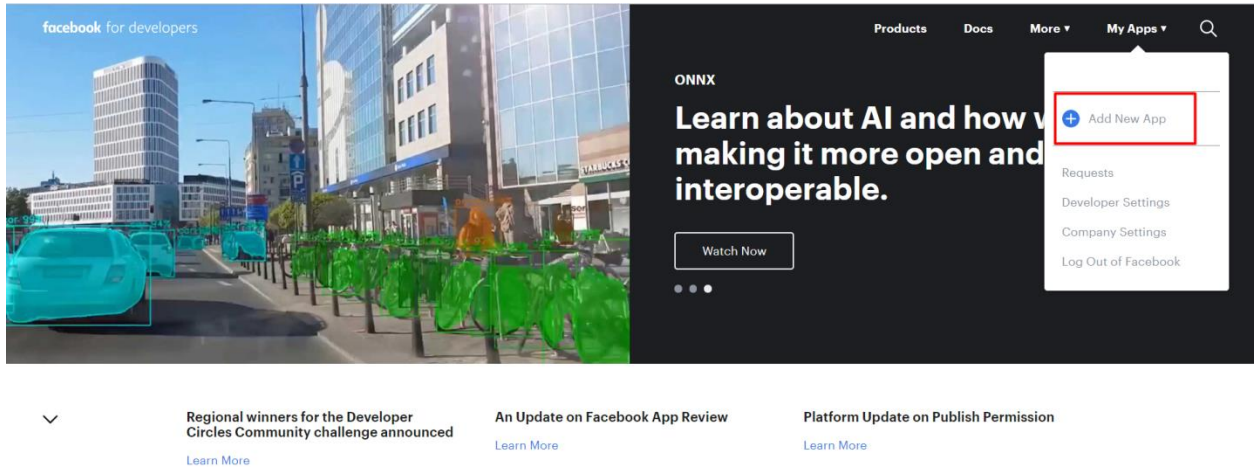

Step 2: Enter your account information
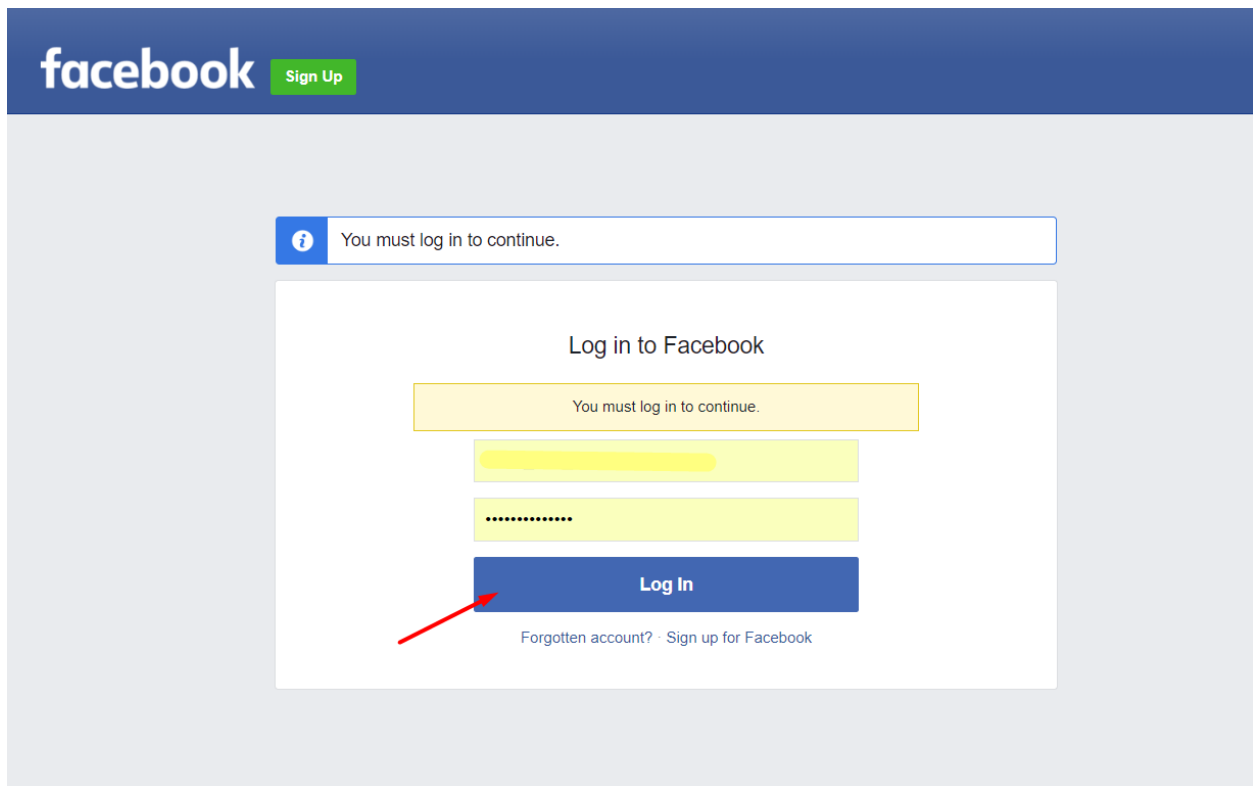

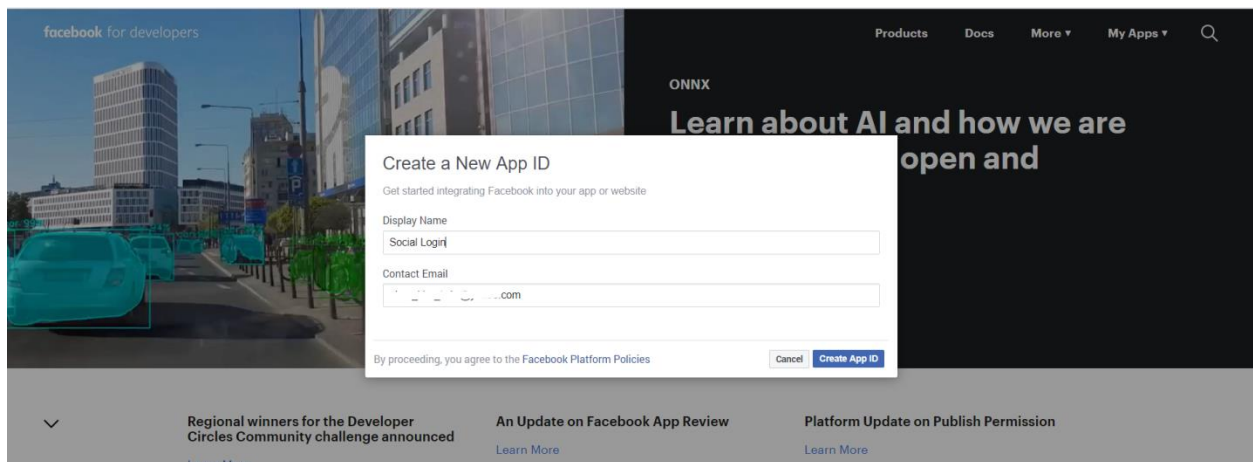

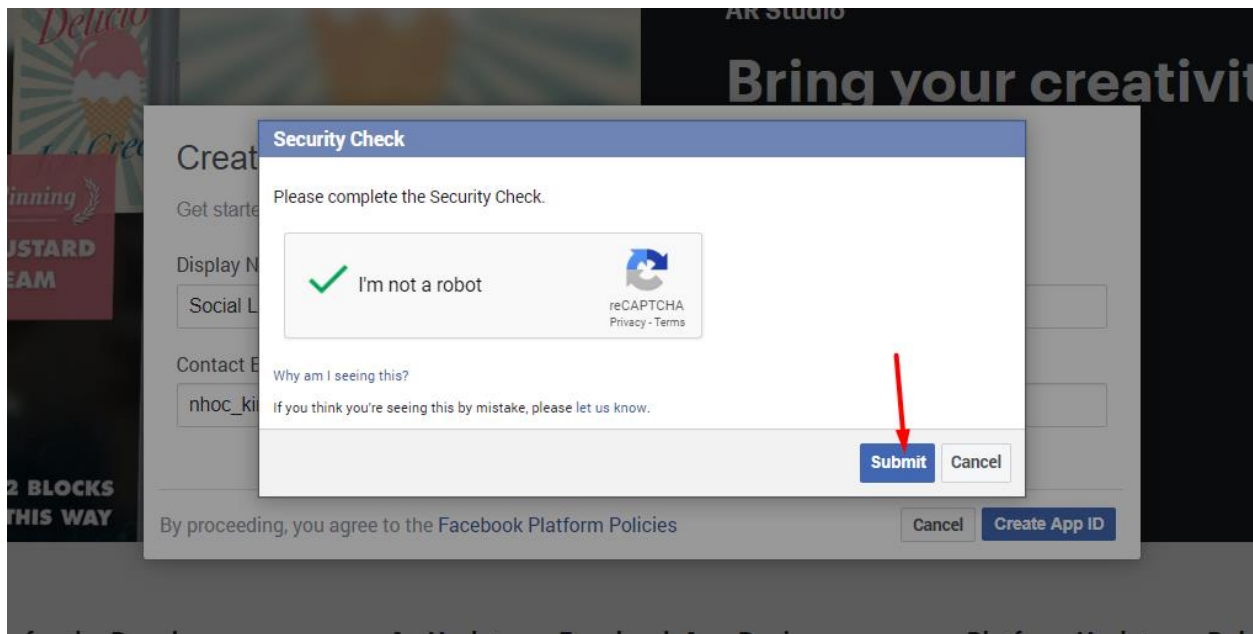

Step 3:

(1) From "My Apps" drop-down menu, select "Add new app"

(2) Enter the Display name for the application. Click "Create App ID".

(3) Complete the Security Check then click "Submit".

(4) Navigate to "Settings" > "Basic". Complete the form with your information.

- At "App domains", enter your domain with "www" and without "www"

- At "Privacy Policy URL", put your own privacy page

- Select suitable "Category" that you want to create for your App

- Fill in the Data protection officer contact information.

- Add platform for your application.

- At "Site URL", enter the URL to your website

Step 4:

(1) Click on "+" icon then click on "Set up" button

(2) Select "Settings" sub menu.

At "Valid OAuth Redirect URIs", enter the URI in the below structure:

{yourwebsite}/{your language}/ module/ets_livechat/callback

Example: https://etssoft.net/videos/ngoc/ps1742/en /module/ets_livechat/callback

If your website has only one language, you don't need to add {language} into Redirect URIs.

Note:

- *Your website is required to be enabled with HTTPS in order to use Facebook login with Facebook API 3.0 or higher*
- *You can see the API version here:*
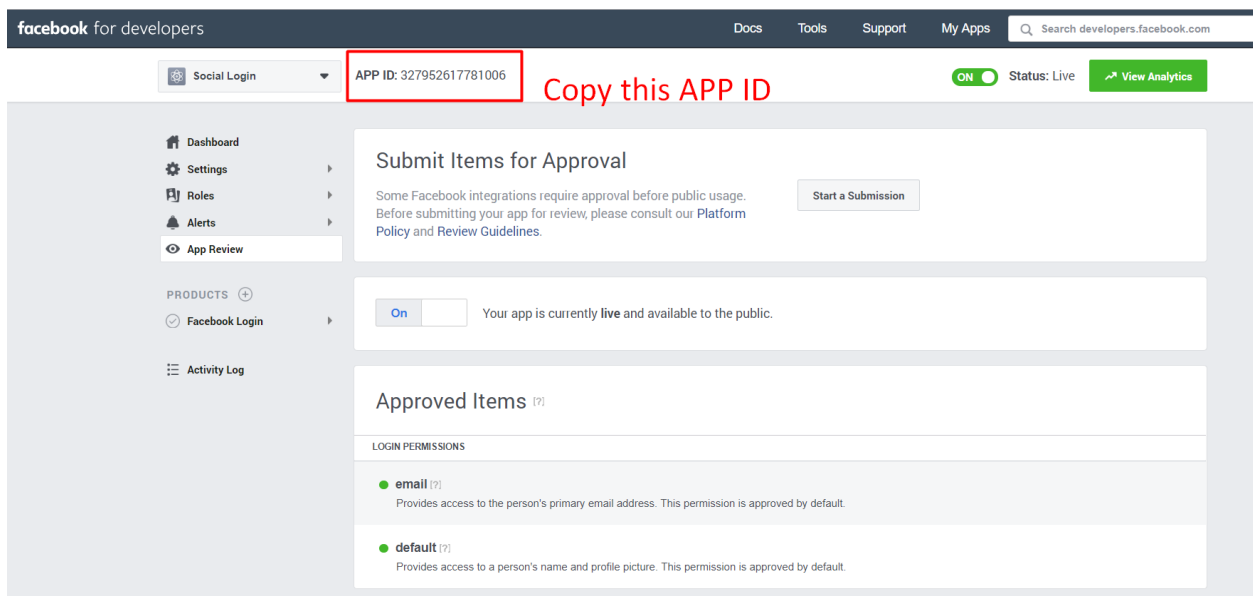

(3) Click "Save changes"

Step 5: After that, move to "App Review" tab.

Turn on "Make app public" option > Click "Confirm" to complete the setting.
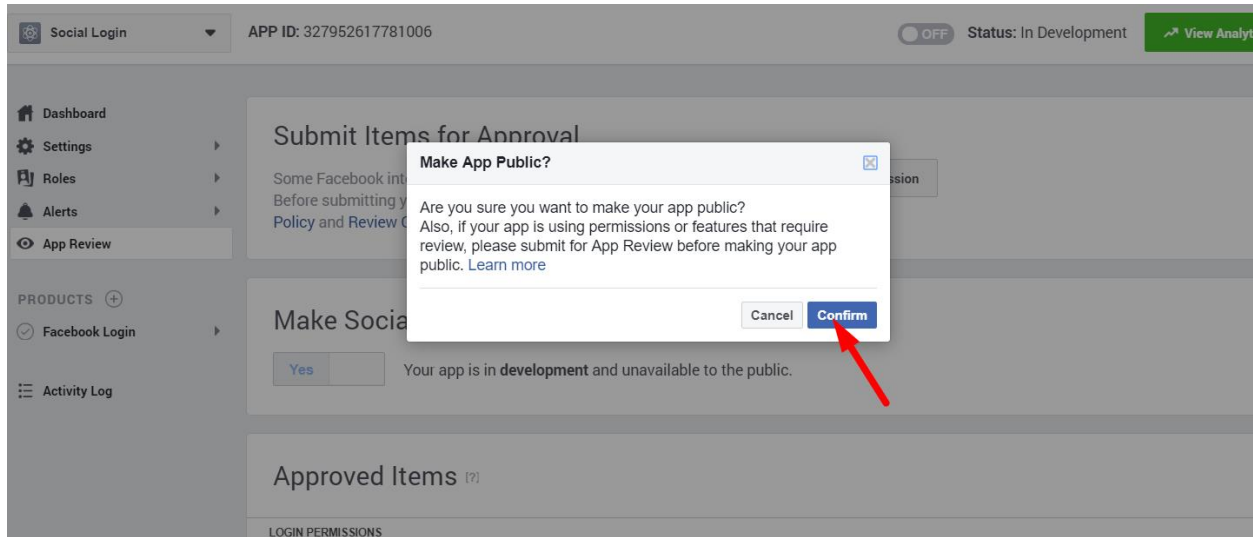

Login permission should be green at "email" and "default".

Now you are done, just copy the App ID and paste in LIVE CHAT module setting.
